

学习机制整体架构设计

操作记录日志示例:

```
{
  "log_id": "a3bb328d-2d9a-46b5-aa6e-1d316ce0f977",
  "timestamp": "2026-04-02T10:15:13.780745",
  "instruction": "双击打开Edge Dev浏览器",
  "instruction_hash": "522e5b4d",
  "task_name": "自动化任务-任务指派",
  "app_context": {
    "active_window": "Program Manager",
    "window_title": "Program Manager"
  },
  "action_structure": ["double_click"],
  "actions": [{"action": "double_click", "coordinate": [230, 751]}],
  "success": true,
  "source": "vlm", ##记录来源于vlm推理的操作
  "step_id": 1
}
```

根据指令相似度、应用相似度和动作结构
判断是否为同类操作进行聚类
